Low Angle Accessory
Posted by wickededge - 01 Feb 2012 21:20

Hi all,

I'm testing the new, much anticipated low angle accessory this week. I'm hoping to get a short video put together showing how it works. Please stay tuned for pics and results. Initial results have been very good. I eked out a sweet 8 degrees on my Takeda at home. I'll be looking at achievable angles on different knives, workflow and overall design. I'm hoping to get feedback from you all to steer the design toward completion. Since we're having them machined initially, we can keep the design fairly fluid until we've settled on something that people are really happy with. At that point, we'll make a mold so we can cast it and bring the costs down.

-Clay

I think that there exists a method for low(er) angle sharpening. Clay has the riser which drops the minimum down a couple of degrees. It is part of the Pro Pack II and comes with the new Heim Joint arm set.

Not sure if the piece is yet being sold individually or not. If you give Kyle or Kay a call, possibly they could set you up.

Just a thought.

Phil

Hi Phil, I did upgrade to the new arms and riser but I need the angle to go even lower. Clay has been working on something extra to do just that.

OK.. trying to be helpful!

Just curious, what are you sharpening at those low angles?

Don't know about Mamum, but I'm looking at scandi grinds.

Would love to see 11 or under.
