Low Angle Accessory

Posted by wickededge - 01 Feb 2012 21:20

Hi all,

I'm testing the new, much anticipated low angle accessory this week. I'm hoping to get a short video put together showing how it works. Please stay tuned for pics and results. Initial results have been very good. I eked out a sweet 8 degrees on my Takeda at home. I'll be looking at achievable angles on different knives, workflow and overall design. I'm hoping to get feedback from you all to steer the design toward completion. Since we're having them machined initially, we can keep the design fairly fluid until we've settled on something that people are really happy with. At that point, we'll make a mold so we can cast it and bring the costs down.

OK.. trying to be helpful!

Just curious, what are you sharpening at those low angles?

Phil

Phil, I know and I appriciate it.

I have few knives with Asymmetrical edge, the blade edge down the left side is flat ground (around 9-11 deg.)and the right side is convex ground (around 40-45 deg.).

Both of these extreme angle ranges are not available with the current WEP offerings. I might be able to get the larger angle with a longer base rod (Clay is checking on it) but the low angles needs some magic from Clay. Hopefully his adapter or some solution will be ready soon....
