A testimony to the capabilities of the Wicked Edge

Posted by razoredgeknives - 12 Jun 2012 00:06

Just wanted to post pics of this crazy dagger I did for someone on the Wicked Edge... turned out beautiful! Took a while though... Finished on .5um strops. I had to put a crazy steep angle on it (something like 30-35*) due to the geometry of the dagger... technically it could be a scandi grind (due to the primary grind itself being about 20*) but I wasn't about to attempt that!! Anyway... here ya go.

Before:

After:

Wouldn't wanted to have attempted this on the belt sander or paper wheels, that's for sure!!

_____

Thanks for your question, Nick, it's a good one. But please don't post it in multiple threads at the same time. It is off-topic here and moved I one of your questions before.

So questions (and answers) related to dealing with angle changes (perhaps by modifying the WEPS), here please: www.wickededgeusa.com/index.php?option=c...d=4145&Itemid=63

And questions (and answers) related to the maths of angle changes, here please: www.wickededgeusa.com/index.php?option=c...d=4154&Itemid=63
