Low Angle Accessory
Posted by wickededge - 01 Feb 2012 21:20

Hi all,

I'm testing the new, much anticipated low angle accessory this week. I'm hoping to get a short video put together showing how it works. Please stay tuned for pics and results. Initial results have been very good. I eked out a sweet 8 degrees on my Takeda at home. I'll be looking at achievable angles on different knives, workflow and overall design. I'm hoping to get feedback from you all to steer the design toward completion. Since we're having them machined initially, we can keep the design fairly fluid until we've settled on something that people are really happy with. At that point, we'll make a mold so we can cast it and bring the costs down.

Patience my friends!
It is coming but there is so much going on all at once! Soon! I haven't even seen it yet!

Cheers

Leo

Hi Guys,

After some extensive testing of the new accessory prototype, I'm not convinced that it's a satisfying solution for all of us for a variety of reasons. That said, I've got a new design out to the machine shop and am just waiting for it to come back. I think the new design will be much better.

Thanks for insisting on quality. I'll happily choose to wait for better product.

But I'm likely to bump this thread from time to time to keep it on the front burner

Roger that! The new adapter is simple, just seems the machine shops are super busy right now...

_____

Been awhile since I been on went to the accessories to see if there was one listed.

Bump

Getting much closer. Heading to VT next week to work with our manufacturing partner there.
