Vice not holding some of my knives...

Posted by EdBrandorff - 06 Dec 2012 14:29

I have been lurking on the forum for some time; although this is my first post. Great community, I have learned a TON!

I recently got my WE system and have been going through my knives sharpening, etc. I have run into an issue with a few of them that I would like your opinions/input on.

Some of my pocket knives have a thick spine that tapers directly to the edge like the pictures below (Schrade 170UH in this case, 4.25" blade x .75"):

[attachment:4]C:fakepath20121206_115251.jpg[/attachment]

[attachment:6]C:fakepath20121206_085323.jpg[/attachment]

The vice, even when tightened as much as possible, cannot hold the knife steady at a 90-degree angle to the base. How do you handle these? I see faults in most of the ways I have thought up to correct.

THANKS!!

Ed

The next question. Will it work as a update to the existing system? If and when this awesome thing appears . . .

Is it a clamp within a clamp?

I wish I could say... I normally don't even mention stuff I've seen... but this worked so well, I couldn't contain myself.

Are you employed by WE?

This could be years away like the serrated option was/is.

It's much closer than that, as is the serrated option.

It's much closer than that, as is the serrated option.

Then I look forward to them both.

I found a thread where you said "soon" on the serrated option back in Jan 2011.

I guess it hasn't been easy?

_____

Serrated never is, everyone has their own pattern. :/

Nope, hasn't been easy. I came up with a great solution a couple of years ago, but finding a source for what I needed has proved impossible, until maybe recently. Last year, I thought I'd found a source but it didn't work out. I have a very good interim solution and a lead on the sourcing I've been looking for all this time. The interim solution works really well, I've prototyped and tested it and now am just needing to focus on it with our machine shop to get it into production.

Wait til you see what I have up my sleeve

So it fits up your sleeve then!

Lower angles than 13˚?

I haven't finalized all the details yet.
