Can you post a link of where you get the lapping film? Curious about that...

Thanks! I think I may try those PSA alum ox lapping films in the link that Leo provided... but I am trying to get in touch with Ken as he said that he has some diamond lapping film. Would be interesting, especially if you wanted to be able to sharpen ceramic knives as discussed in another thread on here.

Josh,

If you can get the films from Ken then that is the way to go. 3M is the OEM supplier for most of these materials, but dealing with them is a *known nightmare* ....If you want to try your luck at 3M directly then:

here is a link you can try... good luck !
