The New Prototype Arms

Posted by RobbieLathem - 17 Jun 2012 20:44

Hey guys just wanted to show my video I did after I got home from Blade this year, I got hooked up with Clay and was able to score a set of the new prototype arms. I really like the new arms they work great. The micro adjustment is ingenious. Here is a look at the new arms on my YouTube channel

Hey Clay

Congrats on the WIN at the show. Glad to see the suggestions we made for the joints were able to be implemented.

Thank you! I think people are really going to love all the things that the new pivot assembly does. I had a partner in the business way back at the beginning and in the design phase, he talked me out of using ball joints due to a limited range of motion. It took a little creativity to get the range we needed to hit all the angles, but it's working great now. Thank you for pushing me in that direction again!

You can put me down for a set of those new pivot arms when they become available.

I am sure happy for you and that you got the vindication for all the hard work and effort you put in. Also as a community to see the product evolve from it's original form is heartening. That speaks volumes for the dedication and enthusiasm you still have for your product.

Compared to other similarly priced products on the market that have not changed in any major way since they were 1st launched.

I second that - good work Clay!

Wow, those look great. Put me down for a set, too!

Clay, any idea on upgrade price range and when they'll be available?

They should be ready in a couple of weeks, just tweaking a few things before we release them. I still don't know the pricing yet, we're trying to pin that down.

_____

I will probably buy the new arms as well.

How much improvement in sharping vs. how much cost = value for

the new arms.

Example 25% improvement for $25.00 is a good deal. Just curious

what are the numbers ?
