New rods and riser
Posted by WayneClark - 10 Jul 2012 18:51

Hey everyone,

Any update on the new rods and riser for the wicked edge system? I have a system I purchased October 2011. Also, are these rods etc. adaptable to my system?? if so when will they be available do you believe?

Thanks, happy customer,

Wayne

Clay,

Thank you for responded to my question about the new arms and riser. I can't wait to get a look at them in your upcoming video. Your WE system is absolutely amazing. Once you get the hang of it (and don't give in) you become more aware of what your trying to accomplish and why.For me, it's getting easier to perform the act of sharpening with outstanding results. It's actually fun to learn what you to do(or at least think I need to do) for different steels,S30v,S35v,M4,Vg-10,ZPD-189,..etc. I respect the fact that your still trying to improve your already successful system. I look forward to the new product. And congratulation on your 2012 award.

Thanks,

Wayne

Got it.

As I'm now pretty much running off the angle cubes, just need to get the rise and pass the bolt if the blade is thin or with what I say your first experiment I saw, that addon in the top of the vice raising the

knife and you getting 9 or less degrees off it.

A vertical one side level for Sushi knives, Emersons, if that's what your thinking, would be stunning.

That would be SWEET!

Put me on the list

YOu add convex scissors and go up the next level to a seat next to the big guy!

Serrated and you get the seat

There is actually a really sweet accessory for convex scissors that I've got prototyped, just need to do some tweaking to the design and get it into production. It has some very nice, TOP SECRET, features that I'm really excited to unveil as well.....

_____

I'm seeing a halo forming around your head

On the list.

I've got to say, there are a ton of ways to sharpen, but never one way only.

I've used the WEPS for not only edges, strick edges, but so many odds and ends and parts of knives that needed fixing it is a true multi-tool, and will grow in time.

Your concept of the knife being stationary opens up new worlds.

Thank you once again!

You're welcome - I'm glad you're enjoying it. It's a lot of fun for me to dream up new schemes for it, listen to everyone's feedback and try to make it even better. This forum sometimes astonishes me with the numbers of really bright, kind, interesting people that are participating.
