Upgrade Dream List

Posted by FredHermann - 02 Nov 2012 21:13

So I was thinking of things that could be improved or additions to an already fantastic tool.

A couple things for the next batch...

improved finish on the slider rods

More base type choices.

A second set of vise screws that allows for thicker blades (there may be a design reason this is not offered now)

longer rods to allow for longer blades (I'm sure these would need more thought as longer blades need more support)

maybe brass rods for bling factor.

custom engraving on the base

Gold plated spinners....wait...now I'm just hallucinating....

You see where I'm going with this.

maybe we can brainstorm and ensure Clays world domination....

Chris,

I'll have to get back to you on that one, cause it's Top Secret! There are a couple ways to do it though and I'm working on one and will start on another before long.

I'll keep dreaming in the mean time.

Thanks!

Yes, please do! And please keep sharing them with me, I love your ideas.

I like the female dovetail track idea, with male dovetails on the riser and L brackets.

Perhaps another sliding rule (with dimples) in the track, how to allow for the slight tilt on the right side of the clamp though.

I mean the left will always be fixed unless it's back to the drawing board.

Perhaps a clamp that squeezes from both sides?

Or do I just adapt a lathe and use that?

The designs I'm working with have free floating, self-centering clamps. They always put the mid line of the knife at the mid line of the jig.

Of course you would do this, that right hand side is a pain.

_____

I'm guessing a central adjusting bolt which has one half left hand thread and the other is right hand?

Don't tell me.

My most wished for item would have to be a serrated solution, which you are also working on.

+1, same for me on what I'd love to see come out next too!

For a christmas present? (would be nice)

_____

I would like a longer set of jaws that could hold flexible knives and make them inflexible during sharpening. Fishing/boning knives can be done incrementally, but I would prefer to get longer strokes on the blades.
