Wicked Edge - Wicked Edge Precision Knife Sharpener

Generated: 20 May, 2013, 07:26 The Straw Mod Posted by DustinKampel1 - 19 Jul 2012 00:11 Hey Everyone! I recently picked up some subway straws to attempt to take some of the play out of the rods to the WEPS. They are fantastic! However I am consistently running into a problem with them coming off the rods. I have tried to superglue them on the rods as well and use zip ties. I was hoping someone out there has a solution to this problem! Thanks everyone in advance for all the amazing wisdom. Everyone on here rocks. D Re: The Straw Mod Posted by PhilipPasteur - 07 Aug 2012 11:52 Martin, I put some dry graphite on the straws. This reduced the added friction to where it is not objectionable (hardly notice it). I tried several other lubricants but they did not work well. Any of the liquids would either dry out too fast or capture filings and other contaminants and gum up. At first I tried to sharpen as fast as some of the videos I have seen show it. I found that slower deliberate strokes give me better results. Of course, when I am sharpening with the WEPS, it is for recreation and the pusuit of perfection, and I don't mind the extra time. If I want a sharp knife fast, I spend 5 minutes with the belt grinder Phil

of the tight fitting straws was slowing me down. With a constant grip the sharpening became easier and faster without compromising a mirror edge.

No pictures though because I've been too busy with the WE to figure out the lighting to take good macro pics...maybe when the novelty wears off..

cbwx34 wrote:

My solution would be... don't use them! Even if there is a bit of play between the holder and the rod, as evidenced by the numerous videos, posts, and microscope pictures, it doesn't hinder getting knives sharp. If you're finding it a problem, just try adjusting your grip slightly.

Phil,

Great advice I have some in one of my gun cleaning tool boxes. I'll try it tomorrow. I'm not interested in fast as much as easier on my shoulder injuries. The WE is unintentially great physical therapy plus it is a lot of fun..oh and I'm making my and my friends & family's knives Wicked sharp.

Thank you,

Marty
