I am sure I am not the only one going a bit nuts counting the hours until I get my WEPS which is not due until Sept. It would be great if there was some sort of automated sytem one coud sign into to determine due date or get an update without plaguing the staff with individual emails.

I was thinking of making a youtube of me singing "I want my WEPS" to the tune I want my MTV... but my dog starts barking and whining everytime I sing. Maybe I'll hum with the lyrics printed out.

If I had to SWAG it, probably a component left in our orders that hasn't passed QC yet, that Hammer's order didn't contain.

Likely means that ours aren't far out, though! 🙂

That would be my guess as well, but only a guess. I understand that the 800/1000 diamonds are running a little late, and the ceramics are running even more late. I'm just waiting for the smoke to clear to put in my order. I'm hoping to get an update on the new "acute angle accessory" to see how it works.

Oh well, I guess it'll get here when it gets here. I just rec'd the curved blade ceramic stones today, so I'm getting a little antsy.
I did order the Pro Pack, so it's likely the extra fine diamond stones are holding it up.

It's really great to see some people getting their WEPS!!!
It will hopefully go much quicker from here!

I actually just got my shipping announcement earlier today! Looks like our guesses were correct, it's the 800/1000 plates holding things up. They went ahead and shipped my kit, and they say the missing plates will be shipped separately in early October. Sounds just fine by me, can't wait to try it out!

komat.: you lucky dog!! LOL.

I'm waiting until November.....

Well, the USPS says it'll be here today! I don't generally trust 'em any farther than I can throw one of their little trucks, but I've got my fingers crossed anyway.

Have to come up with a temporary replacement for the missing diamond plates, perhaps swing down to the auto-parts place and grab some 3M Wet-or-dry. Huh, you know, I wonder if the SiC paper is hard enough to work on a ceramic...

Huzzah! Showed up today in this evening's mail. Dang, this is one well put together piece of hardware. I'll definitely be glad to get the fine stones, though, the ones with it haven't quite broken in yet (only three knives) and they're still rather murderous.

I think I will probably end up with some waterstones to go after those plates, some Shaptons might be just the ticket for finishing up. A daub of gun grease on the pivots is probably also in order, just because. I'm really impressed so far, darn good job, Clay!

Well, I'm definitely looking forward to the 800/1K paddles, the 600 is still quite an aggressive metal cutter. Leaves a decent edge, but I haven't been able to get one to shave off the 600s YET. Probably still my technique there, the edge is clean but fairly toothy. They're starting to break in nicely, though.

Will we have the Shaptons available on the site soon, Clay?

I just knew you were going to say that.
You are forcing me into the Pro Package. Let me know if I need another set of strops for the 1 micron and .5 micron sprays.
